

Unifying Data Security Management Saves Time, Money, and Resources

Streamlining data loss prevention policy management can help **save operational costs by 31%.**

Frank Dickson
Program Vice President,
Cybersecurity Products, IDC

The Need to Streamline Data Security Policies

Consolidating data security policies can **give teams a better view of their data and close enforcement gaps.** However, methods to synchronize or replicate policies can tie up precious staff time, burden already tight budgets, and create more errors than any company can afford.

82%

of organizations are **synchronizing their data loss prevention (DLP) policies** across endpoint, CASB, and secure web gateway (SWG).

58%

say replicating DLP policies across multiple platforms **is time-consuming.**

46%

require more than four people **to build DLP policies.**

Conclusion

IDC research identified **four core themes** associated with DLP implementations in our digitally transformed world.

- 1 Organizations have **multiple DLP solutions and multiple sets of DLP policies.**
- 2 Those that utilize DLP in block mode **experience less frequent breaches.**
- 3 Manual synchronization is time-consuming, resource-intensive, and expensive — **and few organizations do it well.**
- 4 **Companies expressed a strong desire for a single set of DLP policies,** the benefits of which include increased staff productivity, time savings, reduced complexity, and decreased cost.

Demand for a Single DLP Interface

How likely are you to consider transitioning from managing multiple DLP solutions to managing all your DLP solutions from a single DLP interface?
